

LOCKD

A Secure Notes Website

Background

- As cyber attacks become more common, people are wanting a more secure way to store data
- Most notes websites skip encryption and don't allow local storage of data
- LOCKD will fill the market gap by implementing both these ideas
- This will ensure users data is always kept secure from hackers, which is rare in today's world

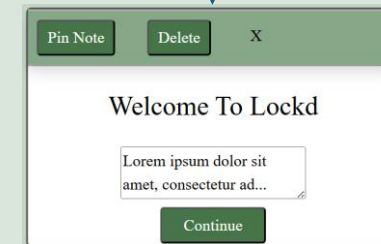

Design

- LOCKD uses bootstrap to implement the front end
- Bootstrap allows the website to be scalable with screen size
- Language tags, relevant element IDs and the ability to change font size all increase accessibility
- Buttons are clearly labelled to increase usability
- Light and Dark themes allow users to customise the website
- Available in English and Swedish allowing a wider range of users
- Upload button allows users to upload compatible encrypted files to the website
- Users can pin notes, so they always appear at the top and are easier to find
- Sign up page to easily allow users to create a new account

Full Note Page

Security

- Staggered note data released to increase protection from shoulder surfing
 - Note title displayed on home page
 - Preview page with 42 characters displayed
 - Note page displaying the whole note
- All passwords salted and hashed to secure from hackers
- All notes encrypted before storing, ensuring only the verified user can read them
- Notes can be downloaded and deleted from our storage to ensure further security
- Automatic log out when tab is shut, ensuring only the user has access to their account
